Student Ruby On Rails Developer

#München

FidorTecS – Disruptive Banking delivered.

FidorTecS was established in January 2013. We are a part of the Fidor Bank Group, one of the most innovative banks worldwide. FidorTecS primary product is fidorOS.

The fidorOS is API - based, highly modular, flexible, and free of any legacy code. B2B customers and partners benefit from a unique, modular product and service tool box. We develop with an agile and user - centered mindset. New features and products are constantly released, usually within a few months.

Our Department Software Development is currently looking for an English speaking:

Student that is eager to be a Ruby On Rails Developer

Be part of our 30+ distributed Software Development team that is dedicated to be building our fidorOS. Our team needs exactly you if you want to take part in the unique opportunity to develop banking software on Rails.

You cannot wait to get a deep inside view into Ruby and the Ruby on Rails framework and want to experience working in distributed agile team environments; you share our conviction that working in a team is more efficient then working on your own; you want to learn what test driven development is all about and know how agile methodologies help you to efficiently and productively live in the creative process of Software Development; If you agree this is your future place to learn all this.
